No one can predict when the next disaster or business disruption will strike; the only certainty is that something unplanned and disruptive will happen. Understanding how to minimize the impact of a disruption, knowing where your vulnerabilities lie, and developing your foundational Business Continuity Management (BCM) program will help your organization recover more quickly and minimize customer harm. We performing Business Continuity assessments, develop plans and provide implementation services across the BCM lifecycle.

**Helping Organizations Across the BCM Lifecycle**

**Crisis Management**

- Crisis management processes focus on stabilizing the situation and supporting the business, using effective planning, leadership, and communication protocols.
  - Develop a Crisis Management Plan and approach that is specific to your organization and culture
  - Facilitate corporate knowledge, decision making and awareness
  - Implement brand monitoring and protect your organization’s digital footprint

**IT Disaster Recovery and Resilient Architecture**

- Successful Disaster Recovery plans must be supported by robust Disaster Recovery architecture, systems, and solutions.
  - Design your enterprise architecture with redundancy, replication, backup, failover, recovery, and similar functionality
  - Implement strategic solutions and technologies

**Business Resumption**

- Business resumption processes focus on the evaluation of people, processes, technology and other resources that are vital to your organization’s operations.
  - Develop a Business Resumption plan as part of your overall Business Continuity program
  - Organize, assess and mitigate the risks associated with planning for and responding to business disruptions and crisis events

Business Continuity & Resilience

Our Approach

An effective Business Continuity and Resilience program provides protection or alternative modes of operation for business processes impacted by a disruption. We integrate leading practices into operations and resilience strategies using our proven methodology across the BCM lifecycle.

Business Continuity Program Assessment
Perform assessment reviews of Crisis Management, Incident Response, Business Resumption, IT Disaster Recovery and BCM Program Maturity

Continuity Risk Assessment
Identify business continuity-related risks to the organization and determine likelihood, significance, and velocity of business impact from a continuity perspective

Business Impact Analysis
Assess various impacts of a business interruption on key business processes and determine business processes criticality, recovery objectives and reliance on technology and third parties to run the business

Strategy Development & Implementation
Develop recovery strategies designed to minimize impact from an outage event and create/ document crisis management, business resumption, and IT DR plans

Business Continuity Managed Services
For some organizations, it may not make sense to hire dedicated BCM personnel, therefore we serve in that capacity to update your plans, facilitate tests, and ensure your plans are always actionable

Business Continuity Testing & Training
Develop and execute BCM training for key personnel responsible for recovery activities and design/ facilitate business continuity, crisis management and disaster recovery exercises

Continuity Program Management
Provide Project Management personnel to help guide your internal team to accomplish your business continuity objectives and stand up a BCM Project Management Office (PMO) and governance structure
