

Managed Detect and Respond

Visibility, Automation and Actionable Metrics

As companies face an increasing litany of cyber-attacks, current Managed Security Services (MSS) and response capabilities – that rely on static security monitoring tools – are insufficient. The future of MSS uses advanced security analytics, deeper detection capabilities, threat intelligence, AI and machine learning to investigate, auto-contain threats and orchestrate effective responses.

Protiviti's Managed Detect and Respond (MDR) solution provides a world-class, unified, scalable service that establishes the foundation to continuously strengthen your security posture. MDR optimizes the delivery of high-quality security incident investigations through expert analysis and automation, applying prescriptive and customized response actions and producing an output of key metrics to monitor and ensure critical corporate assets are protected.

MDR provides piece of mind and validation to your board that your organization possesses the means to prepare, identify, contain, eradicate and recover from modern day threats.

MDR – The Foundation of a Robust Security Posture

Threat Detection

Our teams integrate situational context with end-to-end visibility of your organization's digital infrastructure for leading threat detection capabilities. The combination of network traffic and endpoint telemetry enables real-time analysis to confirm the severity of an incident, providing the confidence to efficiently engage the correct team members and address each situation appropriately.

Threat Intelligence and Threat Hunting

We combine over 40 sources of threat intelligence feeds with our ability to add on proprietary sources, facilitating a focus on specific industry threat vectors and environmental factors in your environment. MDR supports the foundation for reliable threat hunting, attack simulations and purple teaming actions to strengthen an organization's overall security program.

Incident Response

Whether it's through custom-developed response playbooks or automated alert reactions, MDR provides the necessary tools to react swiftly and appropriately to each situation. Additionally, MDR enables forensics professionals to quickly and easily navigate through the plethora of noise that an attack bears. Post-incident forensic investigations require many forms of evidence to be collected before and during an event and MDR enables you to satisfy these requirements.

Real-Time Analytics

Having timely visibility and analytics is critical to measuring the success of a security program. Our skilled team of security experts use the latest security tools and technology to develop custom KPIs, dashboards and reporting, enabling you to visualize the efficiency of your program and track its progress over time.

Managed Detect and Respond

Threat Detections

- SIEM Alerts
- EDR Events
- Network Logs
- Firewalls
- IDS/IPS
- Server Data
- DLP

Threat Hunting and Threat Intel

- Integrated Known IOCs
- Behavior Analysis
- Fileless Malware
- Industry Targeted Attacks
- Offensive Exercises
- Attack Simulations
- Mature SOC

Incident Response

- Manual Custom Playbooks
- Automated Response Actions
- Hash Banning and Process Disruption
- IP Blocks and Network Segmentation
- Endpoint Isolation
- Crisis Management

Consulting Resources

- Program Management
- Technical Management
- Knowledge Transfer
- 24/7/365 Coverage
- Customer Built to Available Budget
- Executive Level KPI Reporting
- Enables Continuous Improvement

Business Outcomes

Significantly improved effectiveness of the tools and technology you already own

Validation of security controls through continuous and ad hoc attack simulation testing

Decreased destruction of data or loss of intellectual property

Decreased mean time to respond with streamlined, coordinated threat response
