

Vulnerability Management Services

Discover, Prioritize, Assess, Report, Remediate and Verify

With the ever-growing risk landscape, companies face numerous challenges

- **Unknown assets, disparate inventories and false positives** lead to frustrated stakeholders.
- **Overwhelming amount of vulnerabilities** which require significant time to prioritize and assign remediation responsibilities.
- **Lack of actionable metrics and reporting** to justify security spend to leadership, limiting visibility for remediation.
- **Limited availability** of qualified resources in the market to discover, remediate and report on vulnerabilities.

How Protiviti Can Help

-  Program Development
-  Scanning Solution Deployment and Configuration
-  Remediation Management & Patching
-  Program Assessments
-  Managed VM Programs
-  Vulnerability Metrics and Dashboard Design

Vulnerability Management is a fundamental part of our security program. Protiviti added the structure and support to our program that was needed to gain visibility into our vulnerability landscape and decrease overall risk in our environment.

— Fortune 500 Retail Client

Business Outcomes

- | | | | |
|---|--|---|--|

Vulnerability Management Services

The Protiviti Vulnerability Management Methodology

Collaborative Relationship

Protiviti acts as an extension of your team, providing expert insights and helping build a comprehensive vulnerability management program that works for all stakeholders.

A Continuous Process

Using an iterative, phased approach to vulnerability management, we build the program with technical staff on the ground, so that you stay ahead of vulnerabilities and act quickly against new and emerging threats.

Flexible Approach

Protiviti provides a flexible model designed to best meet your needs. We believe in customizing our approach to each vulnerability management program in order to take the burden off your team and streamline the identification to remediation process in a fully managed program.
