

OneTrust Analytics Solution

Privacy Analytics with OneTrust & Microsoft Power BI

Our global clients are experiencing unprecedented change in the data privacy landscape. Changing state, federal and global regulations are forcing almost constant business, technical and legal operational changes. At Protiviti, we partner with our clients to understand their privacy obligations, assess needs, and implement appropriate compliance processes, operating models and tools to meet the changing privacy landscape.

In partnership with OneTrust and Microsoft, Protiviti's OneTrust Analytics Solution:

- Delivers a market-leading analytics capability, delivering value to your business through visualisation of privacy processes and compliance.
- Provides a standardized “out of the box” solution to a highly customized version depending on the reporting needs of the client.
- Creates a holistic view of your organization's privacy landscape, integrating with data protection domain data points where needed.

OneTrust Strategic Alliance Partner

✓ Partner since 2017

✓ Partner Advisory Board Member

✓ 175+ Certified Resources

OneTrust is the #1 fastest growing and most widely used technology to help organizations build more trusted privacy, security and governance programs.

The Power of the OneTrust Analytics Solution

Customized Integration

Customized integrations between OneTrust and Power BI to enable visualization of Privacy, Security & Data Governance data, creating meaningful KPIs and dashboards supporting business operations and management reporting.

Holistic View

With over 120+ Power BI connectors, creating a holistic view for privacy and security from OneTrust as well as external privacy data sources where needed.

Management Visibility

Driving greater transparency of privacy reporting across executive teams. Provides increased ROI on privacy investment, less burden on manual reporting processes and increased adoption and integration of privacy processes into the business.

Increased Drilldown Capacity

Power BI users can drill down into privacy information presented, providing executive insight but also underlying data and risk analysis where needed.
