

# SAP Data Management Overview

## Adapt to the new business reality.

As companies embrace the opportunity of digital transformation, SAP HANA is at the core of this effort. But without a solid core containing quality data, the foundation will not support the promised possibilities. Tools like SAP Data Services, SAP HANA Smart Data Integration and SAP MDG are vital to establish and maintain a quality foundation. Organizations must evaluate the total landscape and focus on data management to streamline processes and provide actionable insights.

“ Protiviti’s team helped us gain actionable information and root-cause analysis on the fly by implementing a department-wide, real-time expense and revenue reporting solution in the cloud.

Media Company ”

## What We Do

Protiviti’s Data Management services help companies go beyond monitoring, managing and measuring data. We help our clients take control over their mission-critical information, designing business standards and strategies and establishing a solid data governance program that can help enhance the business value of their information through more controlled and efficient collection, distribution and use of information.

## Our Offerings

Data Readiness Assessment

HANA Platform Assessment

Data Quality and Standardization

Data Modeling and Warehousing

Data Integration and Migration

Data Governance and Management

# SAP Data Management Solutions

## Data Readiness Assessment

- Define your data readiness as you adopt SAP S/4HANA
- Ensure data quality levels before embarking on major transformation projects
- Identify, prioritize and implement remediation strategy

## Data Modeling and Warehousing

- Develop infrastructure strategy for data warehouses, data lakes and big data platforms
- Create custom models to tackle specific issues
- Prebuild models on top of standard SAP processes

## HANA Platform Assessment

- Assess HANA platform deployment to ensure optimum performance
- Use leading practices to promote integrated data management, increasing scalability and lowering complexity
- Align business processes

## Data Integration and Migration

- Create source to target mappings
- Identify data cleansing needs
- Define business rules and transformation requirements
- Transform data to target system
- Conduct validation audits

## Data Quality and Standardization

- Create data quality profiling and scorecards
- Develop data classification and data asset tagging
- Implement data cleansing and standardization utilizing third-party data

## Data Governance and Management

- Develop data governance and data strategy
- Define data ownership and stewardship programs
- Manage business and technical metadata
