

Remote Working Security Solutions

Navigating Uncertainty Safely

By any measure, we are currently living in extraordinary times. Extreme disruption and uncertainty are the new norm. Government policies and guidelines are changing by the hour. In times of stress, organisations can become narrow in their thinking at the very moment when they should be widening their view to novel solutions. How well companies pivot in and through this environment will define them for many years to come.

We are all coming to terms with a new reality, and like you, we have had to adapt quickly. You place significant trust in us to help you achieve your strategic objectives. You are important to us and we are here to support you through this crisis.

One way we are assisting our clients is to help them enable remote working safely and securely. Cyber security threats remain prevalent and are evolving to exploit our changing working patterns and approaches. We can help you by assessing your remote working infrastructure and operating model to identify key risks and design and implement pragmatic remedial solutions.

Whatever your remote working challenges, we can help with rapid, innovative security solutions:

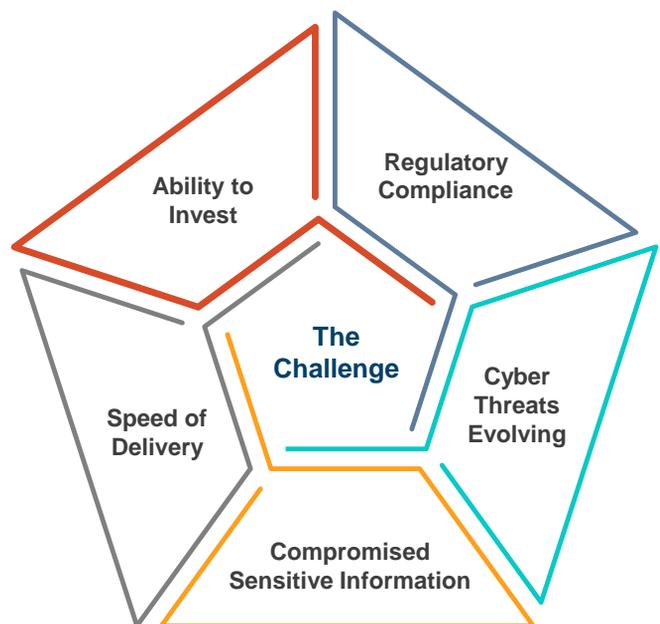

- 01 Ability to Invest** may be limited due to pressure on finances

- 02 Regulatory compliance** and scrutiny remains a priority

- 03 Cyber threats are evolving** to exploit changed working methods

- 04** New opportunities are emerging for **identity theft** and for the compromise of **sensitive customer information**

- 05 Speed of delivery** of remote working solutions is critical to company survival

Remote Working Security Solutions

Leverage our cyber security expertise to rapidly assess your remote working methods and design and deliver effective security solutions

Effective remote working capabilities have rapidly become critical to many companies' very survival. Businesses need to adapt to the COVID-19 pandemic quickly in order to keep their workforce safe and remain productive. Speed is of the essence, but security cannot be compromised during this shift in working methods.

Our remote working security solution starts with a customised analysis of your remote working approaches, covering technology, people, processes and key third-party vendors. We identify the key threats and attack vectors that could be exploited. We perform a targeted assessment of your environment to identify the risks (top-down) and vulnerabilities (bottom-up) in your specific set-up. We then help you design and implement prioritised remediation actions to deliver pragmatic security solutions to achieve your goals.

	Discovery	Assessment	Remediation
Tech	Understand remote working methods, threats and attack vectors	Top-down and bottom up assessment of security risks and controls	Design and implementation of security solutions to address risks
People	Example focus areas:	Example focus areas:	Example focus areas:
Process	Threat modelling, analysing your environment and remote access methods, kill chain analysis.	O365, VPN, Cloud, secure configuration, penetration testing, data protection, monitoring, system access, mobile device management.	Quick wins, better use of existing technologies, configuration updates, process enhancements, tool implementation.
Vendors			

We will rapidly identify and help you address key remote working risks and vulnerabilities. Our assessment will be targeted to your environment and will give you quick results. Our remediation recommendations will be pragmatic and designed to give you an action plan that can be delivered at pace.

Contact Protiviti cyber security leaders to learn how a remote working security assessment could benefit your organisation.

We will provide:

Security experts that are well-versed in remote access methods, supporting technologies, risks and remediation options.

A flexible assessment approach that will be customised to your environment and greatest areas of risk.

Rapid results through our targeted assessment approach.

Pragmatic remediation options that are based on practical experience and deep expertise.

Access to our security leaders for expert advice and industry insights.
