

Rethinking Work with Automation

Emerge Stronger, Scalable, and More Resilient

Increasing levels of automation has been a strategic priority for many organizations over recent months and years. These organizations have realized they could not compete with born digital companies, delivering the experiences customers and employees expect, at the margin customers demand, without eliminating unnecessary manual processing.

We are now living through unprecedented times. The transition to this new norm has been much easier for those organizations with a high level of digital maturity. Highly optimized processes and business models enable these organizations to scale up or cut cost rapidly where needed. Increased levels of automation is a significant factor in this. Customers will quickly transition to organizations that are able to fulfill their needs and will not return following the crisis. Many digital leaders are, as a result, prospering during this global crisis at the expense of those that have not made the necessary investments.

The understandable reaction for many will be to consider cutting back on automation initiatives to help manage cashflow. Although, now, more than ever, is the time for organizations to hold their nerves and to invest in the future. If well managed, the return on investment can be high, with payback in months or even weeks.

Enable Your
Workforce With
Intelligent
Process
Automation

Embrace a practical approach to Intelligent Process Automation to deliver value.

Efficiency

Rethink how you work with a remote workforce, address process changes, manage fluctuating volumes and efficiently keep the lights on.

Resiliency

Automation is key to business continuity; it's resilient to unforeseen issues similar to the current pandemic.

Cost-Management

Deploy automation to help manage cost reductions now and gain a long-term positive return on the investment.

Focusing Intelligent Process Automation on the challenges you need to solve quickly

We recognize that you are adapting to these uncertain times, focusing on the safety of your people, your customers and the continuity of your business. We are committed to helping you quickly explore these new challenges and design a solution to address your immediate needs.

We are helping organisations across all industries address key challenges using process automation to emerge stronger and more resilient.

Accelerating Intelligent Automation Programs: Protiviti offers a unique approach to automation, leveraging a cross-functional team of experts that are deeply skilled in IPA, but also possess the process knowledge required to truly deliver optimized automation solutions. Our commitment to you is that we bring pragmatic solutions that reflect your current appetite to invest and that deliver a quick return on investment.

Intelligent Process Automation Virtual Workshops: Helping organizations launch or refocus intelligent automation initiatives. These workshops, powered by Design Thinking principles, are highly effective working sessions, facilitated online, to enable remote working teams to envision how intelligent automation can improve operational performance and make working lives easier. These sessions draw attention to leading practices and focuses your team to think creatively about automation potential.

Contact our Intelligent Process Automation leaders to learn how an accelerated virtual workshop could benefit your organisation.
