

The Protiviti Risk Index™

A Single-Number Snapshot of Organizational Risk

Protiviti's conversations with Board members and executives of leading financial services firms across the globe have frequently come back to three simple questions:

Am I Riskier Today than I was Yesterday?	The Protiviti Risk Index™ can generate a <i>Risk Index Score</i> based on changes in risk factor outcomes.
Am I Going into a Riskier Time?	Our solution can create a Risk Index that consists of <i>time-oriented measures</i> (past, present, future); to extrapolate future-oriented risk measures.
What are the Underlying Causes?	The Protiviti Risk Index™ can enable you to review shifts in performance of <i>underlying factors</i> .

The Protiviti Risk Index™ is a proprietary, powerful solution to focus attention on highest priority items in an intuitive and straightforward manner. We have built a customizable, highly intuitive software tool to house the methodology within Microsoft Sharepoint, leveraging data visualization software. It is designed to capture, calculate and evaluate a large volume of complex risk data and reduce it to a single-number snapshot of organizational risk to guide risk management strategies and investments. The Index facilitates the following high value characteristics in risk reporting:

Format	A single number that can be used as a quick risk reference.
Versatility & Scalability	May be tailored to the enterprise, business unit, function, product, or geography.
Real-Time	Allows for updates as often as needed providing for ongoing and continuous monitoring.
Strategic	Captures the most important risk drivers that directly impact achievement of strategic and operating objectives.
Leading	Provides early warning signals that allow management to focus resources aimed at preventing/mitigating additional risks from arising within a defined tolerance level.
Credibility	Makes intuitive sense and has buy-in at all levels of the institution.

Risk Index Summary

The index homepage is the single number snapshot of organizational risk – it is the entry point into the risk index.

Chief Risk Officer View

The CRO view is built to show the enterprise risk index score, the risk outlook of the organization, trends by geography and line of business, positions of the material risk categories, notable risk movers, and key matters requiring attention.

The screen shots above are representative examples only. The Protiviti Risk Index™ is a proprietary methodology embedded within a bespoke tool that can be tailored to your company's specific requirements.
