

# Microsoft Cloud Assessment

## Paving Your Path to the Cloud

Protiviti's Microsoft Cloud Assessment will allow you to understand your maturity with respect to cloud transformation while evaluating your application environments. During the 3 to 6-week assessment, the team will run an assessment tool and execute a series of funded workshops and interviews that are used to assist in the build of cost benefit and ROI analysis for your organization. Upon completion, you will be provided with a roadmap that includes a cloud migration plan associated ROI that can be leveraged to build your business case supporting your cloud strategy.

**“83% Of Enterprise Workloads Will Be In The Cloud By 2020”**

-Forbes, 2018

# Our Cloud Assessment Identifies

## Three-Step Cloud Assessment

### Discover

Using cloud migration assessment tools, compile an inventory of the physical and virtual servers in your environment. This data can include profile information and performance metrics about your applications. At the end of this step, you'll have a complete inventory of servers with metadata for each, allowing you to build your cloud migration plan.

### Map On-Premises Applications

Using information from your discovery, map servers to represent applications. This will expose dependencies or communication between servers for proper grouping in your cloud migration plan—to help reduce risks and ensure a smooth migration. This will allow you to identify the best migration strategy for each application based on its requirements and migration objectives.

### Evaluate

With your application groups mapped, evaluate how best to move each application. Using cloud migration assessment tools for Azure resource and migration recommendations. Evaluate the potential cost savings of migrating to Azure by calculating and comparing your total cost of ownership (TCO) for Azure with that of a comparable on-premises infrastructure.
