

Robotic Process Automation

A STRAIGHT-FORWARD APPROACH

Business tools and applications are growing at a fast rate, and it is becoming more and more difficult to capture and interpret all the disparate data streams. While a digital system may not be hard to manage on an individual basis, technological growth has forced organizations to confront the issue of how to manage and direct multiple systems toward a unified business objective. Organizations are now turning to robotic process automation (RPA) as the preferred automation tool.

Protiviti's focus is on ensuring that the approach taken to RPA is sustainable. This means, taking a strategic approach, applying a risk lens, demonstrating quick value, and ultimately establishing an operating model for RPA that enables the business to realize the value without becoming dependent on us.

Protiviti RPA Solution Offerings

Protiviti empowers organizations to implement impactful RPA programs that transform physical processing into digitized organizational capital.

RPA STRATEGY

Develop RPA strategy, taking into consideration specific objectives, governance, IT infrastructure, security, culture and change management protocols.

PROCESS EVALUATION

Identify and evaluate processes suitable for automation; support the standardization of identified processes.

"PROOF OF CONCEPT"

Perform pilot execution of RPA offerings and develop business case necessary to obtain stakeholder buy-in and support.

INFRASTRUCTURE VALIDATION

Assess and evaluate readiness of IT infrastructure and data structure; evaluate suitability of automation software options.

BOT DEVELOPMENT

Configure sustainable RPA environment and develop, test, implement bots to achieve targeted benefits.

TRAINING & CHANGE MANAGEMENT

Develop and deliver training to support end-users and administrators; provide change management expertise and support to address the operational and organizational impacts of automation.

CENTER OF EXCELLENCE (COE) DESIGN

Develop the design of an effective COE and related governance model to enable a stable and governed RPA function.

OPERATE & MAINTAIN

Provide on-going administration support of RPA activities and execution of the COE; provide maintenance and exception management of production bots.
